

Pocket PostCode

InfoScape Systems introduces its first product for the Pocket PC: **InfoScape Pocket PostCode**. Developed using KaioneSoft's new Pocket Access-based Database application, **SprintDB Pro**.

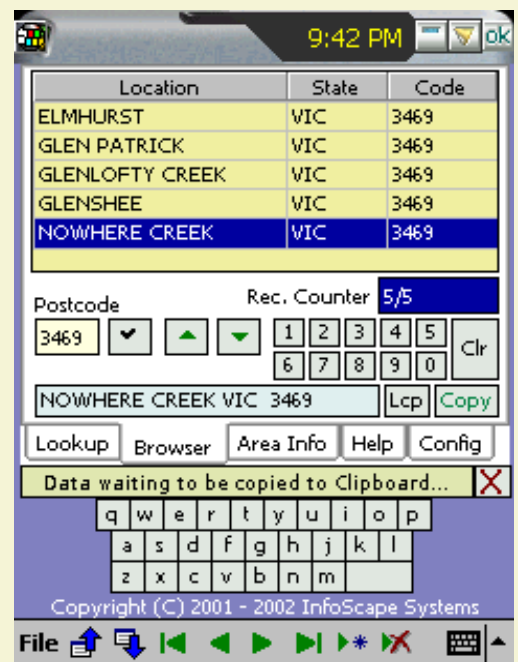

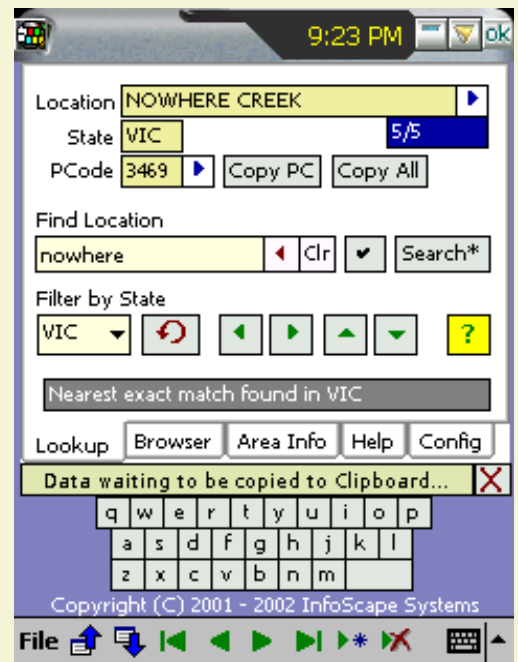

Pocket PostCode allows you to locate Australian postcodes quickly and easily. It is extremely fast, especially when you use the *Exact Match* search button.

You can easily copy the postcode number or the Place name, State and Postcode and paste it into any Pocket PC text-based application, for example, Pocket Word, Excel, etc.

Advanced Features

- **Fast** searching — *Pocket PostCode* takes a fraction of a second to find a location or postcode number.
- Includes a unique 'Adjoining Areas' lookup function, allowing you to produce a list of locations in the same postcode area.
- A choice of Search types — *Exact Match* and *Like* search.
- Restrict your search to a selected State or Territory.
- Search results can be formatted to your requirements. You can choose between 4 choices of spacing and commas — or leading caps and state full name.
- Format preview box.
- Includes a Postcode Area Information table, listing the postcode range for each Australian state and territory.
- Includes a build-in alphanumeric keyboard with **Clear** and **Backspace** buttons.
- Can be launched directly from your PPC desktop.
- Very easy-to-use interface that includes a Help system and instant information feedback.
- *Great for people on the move!*
